Commentary at a glance

Performance

In the month under review the Company's NAV total return was 2.0% and the FTSE All-Share Index total return was 2.5%.

Contributors/detractors

The biggest positive contributor was NatWest. The biggest detractor was an underweight position in AstraZeneca.

Outlook

We think the valuation of UK equities is compelling compared to their equivalents overseas and the dividend yield is particularly attractive relative to the main alternatives.

Company overview

Objective

The Company's objective is to provide long-term growth in income and capital, principally by investment in equities listed on the London Stock Exchange. The Board fully recognises the importance of dividend income to shareholders.

Highlights

Renowned for its record-setting annual dividend increases since 1966, the Company targets long-term income and capital growth.

Fund Manager commentary

Investment environment

The FTSE All-Share Index rose 2.5% following some favourable corporate results. It was also helped by sterling weakening against the US dollar.

Consumer price inflation (CPI) was 3.2% year-on-year in March, the lowest level in more than two and a half years.

Monthly GDP increased by 0.1% in February, while January's growth was revised up to 0.3%, making it likely that the UK economy will exit a technical recession.

In the US, annual inflation rose to 3.5% in March, which prompted investors to once again reassess the outlook for interest rate cuts this year.

Portfolio review

The biggest positive individual contributor was NatWest, the banking group, as the company has been benefiting from the current structure of interest rates and a low level of impairments. The second biggest positive contributor relative to the benchmark was not holding London Stock Exchange, which underperformed during the month.

The largest detractor was AstraZeneca, the pharmaceutical company. Its shares did well, but we hold an underweight position relative to the benchmark and therefore this proved negative. M&G, the fund manager and life assurer, also detracted from performance after its

shares gave back some of the gains from earlier in the year.

In terms of activity, we bought two new holdings in medium-sized UK listed companies. The first was Dowlais, the automotive components maker spun out of Melrose in 2023. Dowlais is the leading global supplier of drive systems. The second was Inchcape, an automotive distributor operating in 40 countries. We completely sold out of Siemens, the German industrial conglomerate, as its share price had reached our estimate of 'fair value'.

Manager outlook

We think inflation will continue to fall over the next few months as energy price rises fall out of the 12-month calculation. The next move in interest rates is likely to be down, but the continuing high level of wage growth may lead to a cautious approach from the Bank of England.

Some two-thirds of revenues earned by companies that we are invested in come from overseas, which provides useful diversification. However, there is also considerable uncertainty for the global economy and elevated geopolitical tensions. Nonetheless, we think the valuation of UK equities is compelling compared to their equivalents overseas, possibly due to the low allocation from domestic institutional investors. In particular, the dividend yield of UK equities is attractive relative to the main alternatives.

Glossary

Discount/Premium

The amount by which the price per share of an investment company is either lower (at a discount) or higher (at a premium) than the net asset value per share (cum income), expressed as a percentage of the net asset value per share.

Gearing

The effect of borrowing money for investment purposes (financial gearing). The amount a company can “gear” is the amount it can borrow in order to invest. Gearing is used in the expectation that the returns on the investments bought will exceed the costs of the borrowings that funded the purchase. This Company can also use synthetic gearing through derivatives and foreign exchange hedging and/or other non-fully funded instruments or techniques.

Leverage

The Company's leverage is the sum of financial gearing and synthetic gearing. Details of the Company's leverage limits can be found in both the Key Information Document and Annual Report. Where a company utilises leverage, the profits and losses incurred by the company can be greater than those of a company that does not use leverage.

Market capitalisation

Share price multiplied by the number of shares in issue, excluding treasury shares, at month end. Shares typically priced mid-market at month-end closing.

Net Asset Value (NAV)

The total value of a Company's assets less its liabilities.

NAV (Cum Income)

The value of investments and cash, including current year revenue, less liabilities (prior charges such as loans, debenture stock and preference shares at fair value).

NAV (Ex Income)

The value of investments and cash, excluding current year revenue, less liabilities (prior charges such as loans, debenture stock and preference shares at fair value).

NAV total return

The theoretical total return on shareholders' funds per share reflecting the change in Net Asset Value (NAV) assuming that dividends paid to shareholders were reinvested at NAV at the time the shares were quoted ex-dividend. A way of measuring investment management performance of investment trusts which is not affected by movements in discounts/premiums.

Net assets

Total assets minus any liabilities such as bank loans or creditors.

Net cash

A company's net exposure to cash/cash equivalents expressed as a percentage of shareholders' funds, after any offset against its gearing. This is only shown for companies that have gearing in place.

Net gearing

A company's total assets (less cash/cash equivalents) divided by shareholders' funds expressed as a percentage.

Ongoing charges

The total expenses for the financial year (excluding performance fee), divided by the average daily net assets, multiplied by 100.

Risk rating

The key measure used to assess risk is volatility of returns, using historic net asset value (NAV) performance of the Company over 1 and 3 years. In this instance volatility measures how much a company's NAV fluctuates over time in relation to the UK Equity market. The higher a volatility figure, the more the NAV has fluctuated (both up and down) over time. Please note that risk categorisations are indicative and based principally on historic data and should not be solely relied upon when making investment decisions.

Share price

Closing mid-market share price at month end.

Share price total return

The theoretical total return to the investor assuming that all dividends received were reinvested in the shares of the company at the time the shares were quoted ex-dividend. Transaction costs are not taken into account.

Total assets

Cum Income NAV multiplied by the number of shares, plus prior charges at fair value.

Yield

Calculated by dividing the current financial year's dividends per share (this will include prospective dividends) by the current price per share, then multiplying by 100 to arrive at a percentage figure.

Source for fund ratings/awards

Overall Morningstar Rating™ is a measure of a fund's risk-adjusted return, relative to similar funds. Fund share classes are rated from 1 to 5 stars, with the best performers receiving 5 stars and the worst performers receiving a single star.

Overall Morningstar Rating™ is shown for an investment company achieving a rating of 4 or 5.

Morningstar Medalist Rating™

Ratings should not be taken as a recommendation. For more detailed information about Morningstar Ratings, including its methodology, please go to www.global.morningstar.com/managerdisclosures.

Company specific risks

- This Company is suitable to be used as one component of several within a diversified investment portfolio. Investors should consider carefully the proportion of their portfolio invested in this Company.
- Active management techniques that have worked well in normal market conditions could prove ineffective or negative for performance at other times.
- The Company could lose money if a counterparty with which it trades becomes unwilling or unable to meet its obligations to the Company.
- Shares can lose value rapidly, and typically involve higher risks than bonds or money market instruments. The value of your investment may fall as a result.
- The return on your investment is directly related to the prevailing market price of the Company's shares, which will trade at a varying discount (or premium) relative to the value of the underlying assets of the Company. As a result, losses (or gains) may be higher or lower than those of the Company's assets.
- If a Company's portfolio is concentrated towards a particular country or geographical region, the investment carries greater risk than a portfolio that is diversified across more countries.
- Where the Company invests in assets that are denominated in currencies other than the base currency, the currency exchange rate movements may cause the value of investments to fall as well as rise.
- The Company may use gearing (borrowing to invest) as part of its investment strategy. If the Company utilises its ability to gear, the profits and losses incurred by the Company can be greater than those of a Company that does not use gearing.
- All or part of the Company's management fee is taken from its capital. While this allows more income to be paid, it may also restrict capital growth or even result in capital erosion over time.
