Benchmark

Benchmark: Investment Association Asia Pacific excluding Japan Sector*

This is a Comparator Benchmark. Given its geographic focus the Fund's performance can be compared against the Benchmark. However, the Fund is actively managed and is not constrained by any benchmark.

* Many funds sold in the UK are grouped into sectors by the Investment Association (the trade body that represents UK investment managers), to facilitate comparison between funds with broadly similar characteristics.

Fund investment objective and policy

The objective of the Fund is to achieve long-term (5 years plus) capital growth. The Fund invests at least 80% of its assets in shares of companies incorporated, domiciled or carrying out the main part of their economic activity in Asia and Australasia, excluding Japan. The Fund may use derivatives (complex instruments) to manage the Fund more efficiently, with the aim of reducing risk, reducing costs and/or generating additional capital or income.

Fund strategy

We seek to invest in companies whose share prices are substantially below our estimate of fair value. Our search for undervaluation leads us to look for new ideas in unloved areas of the market. At the same time we have a clear preference for cash-generative companies with strong balance sheets, as these attributes suggest sustainable business models and conservative management.

Past performance is not a guide to future returns. Performance figures are based on the Z Accumulation share class. As this was launched on 12 November 2012, for the periods prior to this launch date, performance figures are based on the accumulation share class, without any adjustment for fees. Performance figures for all share classes can be found in the relevant Key Investor Information Document. Fund performance figures are shown in sterling, inclusive of reinvested income and net of the ongoing charge and portfolio transaction costs to 31 January 2023 unless otherwise stated. Sector average performance is calculated on an equivalent basis. The standardised past performance information is updated on a quarterly basis. Source: Lipper.

Investment risks

- The value of investments and any income will fluctuate (this may partly be the result of exchange rate fluctuations) and investors may not get back the full amount invested.
- The fund invests in emerging and developing markets, where there is potential for a decrease in market liquidity, which may mean that it is not easy to buy or sell securities. There may also be difficulties in dealing and settlement, and custody problems could arise.
- The Fund may use Stock Connect to access China A Shares traded in mainland China. This may result in additional liquidity risk and operational risks including settlement and default risks, regulatory risk and system failure risk.
- The fund may use derivatives (complex instruments) in an attempt to reduce the overall risk of its investments, reduce the costs of investing and/or generate additional capital or income, although this may not be achieved. The use of such complex instruments may result in greater fluctuations of the value of the fund. The Manager, however, will ensure that the use of derivatives within the fund does not materially alter the overall risk profile of the fund.
