Risk Factors & Glossary

The Fund may invest in shares of companies listed on stock exchanges in the United Kingdom, and outside the United Kingdom, exchange rate fluctuations may cause the value of investments to go down as well as up. Investing in companies based in emerging markets may involve additional risks due to greater political, economic, regulatory risks, among other factors. The Fund may invest in derivatives for the purposes of efficient portfolio management and hedging. The value of this portfolio is subject to fluctuation and past performance is not necessarily a guide to future performance. The performance is calculated for the portfolio and the actual individual investor performance will differ as a result of initial fees, the actual investment date, the date of reinvestment and dividend withholding tax. All terms exclude costs. Fluctuations or movements in exchange rates may cause the value of underlying investments to go up or down. Do remember that the value of participatory interests or the investment and the income generated from them may go down as well as up and is not guaranteed, therefore, you may not get back the amount originally invested and potentially risk total loss of capital. Therefore, the Manager does not provide any guarantee either with respect to the capital or the return of a portfolio.

AMC – Annual Management Charge

A charge covering the costs associated with managing the fund. Although it is expressed in an annual percentage figure, the charge is usually taken in 12 monthly amounts.

OCF - Ongoing Charges Figure

This is a figure representing all annual charges and other operating charges taken from the fund. This includes the AMC.

AUM – Assets Under Management

The total market value of the investments held in this fund.

Annualised performance

The rate of growth the fund makes each year over the specified period.

Discrete Performance

The performance of the fund between two fixed, specific time periods.

Base Currency

The currency in which the net asset value of each portfolio is calculated.

Market Cap allocation

The percentage of the fund's assets that are invested in companies having market capitalisation of a particular size (the total value of a company's shares).

Market Capitalisation Exposure

The percentage of the fund's assets that are invested in companies having market capitalisation of a particular size.

Share Class

Share class is a designation applied to a share in a fund. Different share classes within the same fund will confer different rights on their owners, and potentially restrictions on ownership.

Price / NAV per Share

The price (or NAV per share) is an expression for net asset value that represents a fund's value per share. It is calculated by dividing the total net asset value of the fund or company by the number of shares outstanding.

Risk reward indicator

Used to indicate the level of risk of a fund by providing a number from 1 to 7, with 1 representing low risk and 7 representing high risk.

Volatility

A figure for how much the fund's returns deviate from the average returns over a period.
